ABSTRACTED-PUB-NO: JP 58213099A

BASIC-ABSTRACT:

Process comprises mixing 40-5 pts. wt. sodium carbonate having apparent density 0.25-0.7 g/ml, 250-600 microns average particle size, and a particle size distribution consisting of up to 20 wt.% of up to 125 microns fraction, with 60-95 pts. wt. base component of spray dried powder detergent.

Prod. has superior resistant to caking during storage. If heavy or light soda ash is used as in prior industrial detergents, the resistance to caking is similarly improved but sepn. of soda ash from the base compsn. is caused. Use

of the specified sodium carbonate inhibits such sepn. thus ensuring a constant compsn. and stable detergent characteristics.
